

EYPC E-Docs Identifying Themes and Taking Stock

Identifying Themes

1. Summarize how your data is objective, local, and representative. Consider the following:
1) the sources of your existing data; 2) your survey population, sampling type, and survey type; and 3) the characteristics of your observed population.

→ Objective:

→ Local:

→ Representative:

2. What themes do you see among the data? Identify general overarching themes. In the next part of this activity, you will thoroughly describe the themes and provide supporting data.

→ What are common responses or behaviors among community members?

→ What patterns do you see within your community?

→ What are the health benefits or reduced health risks of our proposed policy?
